Chester Surface Protector A

DESCRIPTION:

Chester Surface Protector A is a two-element **liquid** epoxy-novolac composite. Contains modified epoxy-novolac resins and barriers fillers. Product is designed to protect metal and concrete surfaces from aggressive chemicals mediums at higher temp. Cures at room temperature. 100% Solids.

TYPICAL APPLICATION:

•CORROSION PROTECTION OF METAL AND CONCRET	E
SURFACES	

• TANKS

- PIPELINE COATINGS
- MARINE BUOYS
- EFFLUENT TANKS AND CHANNELS

Technical data			
Cured Density	 	1,2 g/cm ³	
Mix Ratio by Volume	 	whole pack	
Mix Ratio by Weight	 	2:1	
Color		black	
Temperature Resistance Wet	 	60 ⁰ C	176 ⁰ F
Temperature Resistance Dry	 	80 ⁰ C	248 ⁰ F
Minimal Working Temperature	 	-50 ⁰ C	-58 ⁰ F
Working Life (68 [°] F)(20 [°] C)	 	3,5 h	
Time to apply 2 nd layer	 	24 h	
Chemical resistance in 20 °C		7 days	

DIRECTIONS FOR USE

Conditions during the application.

The product is not recommended to apply when the ambient temperature is below $5^{\circ}C$ and the relative humidity is above 90% or when condensation occurs on the surface to be repaired.

Metal surface preparation.

The surface in the part to be repaired shall be degreased chemically or by gas-jet, then mechanically cleaned by means of blast cleaning, sanding, or with the help of the abrasive paper, grinders, pin-lift grinding wheels, etc. You should always aim at thoroughly remove all loose contamination and make the surface roughened. A correctly prepared surface shall be degreased using for ex. Chester Fast Cleaner F-7 or Chester Ultra Fast Degreaser F-6.

Concrete surface preparation

The concrete surface should be dry, dust removal and cleaned from small concrete parts. New concrete must not have more than 28 days, and cleaned from "cement wash". Light precipitation of surface is allowed.

Mixing and application of the composition.

The contents of the container marked **Reactor** pour it into a container labeled **Base**. Mix both components until obtaining a uniform color.

Once the mix was prepared it should be directly applied, because curing starts immediately and every late could weaken the adhesion.

Two coats of 0.5 - 0.6 mm thickness are recommended for applying. As the second coat of the material must be applied, the first one can not be fully cured. Recommended is using of brush or roller for applying this material. to obtain the best properties of the coating application should be carried out at a temperature of $10 \,^{\circ}\text{C} - 30 \,^{\circ}\text{C}$

Chester Surface Protector A

Coverage rate

Using 1kg of the product you can obtain 1,67 m^2 coat of 0,5 mm thickness.

To cover a surface of $1m^2$ of 0,5 mm thickness - you need 0,6 kg of the product.

Values given above are theoretical ones. In practice because of various roughness of the surfaces, decrements, irregularity – efficiency of the product may differ by +/-15%

The information contained above refers to the best of our current knowledge and accurate the day of publication. However, its use says under the control of the customer. This Technical Data Sheet cannot hold CHESTER MOLECULAR responsible in anyway. Chester Molecular Research and Development Department, 05-092 Łomianki, str. Technical Data Sheet

September 2015

CURE TIME ACCORDING TO THE TEMPERATURE

Ambient temperature °C (°F)	Time for application [h]
10 (50)	4,5
20 (68)	3,5
30 (86)	2,0

It should be remembered that the rate of the reaction significantly depends, apart from the ambient temperature, on the quantity of the used material (the bigger mass of the mixed material, the reaction rate increases). The above presented times refer to the mass of 0.25 kg of the composite.

CHEMICAL RESISTANCE

Tests were carried at the temperature of $20^{\circ}C$ (68°F). The tests were carried after 7 days of curing at the temperature of $20^{\circ}C$ (68°F).

- 1 Prolonged immersion
- 2 Short-term immersion

3 – Not recommended

Medium	Odporność chemiczna
Nitric acid 15%	1
Phosphoric acid 10%	1
Acetic acid 5%	1
Amines up to 20%	1
Hydrochloric acid 15%	1
Ammonia 20%	1
Water 60°C(140oF)	1
Sea water	1
Ethanol	2
Phenol 5%	1
Acetone	3
Methylene Chloride	3

Full table of chemical resistance is on the website<u>http://www.chester.com.pl/GBA/multimedia/2</u>

<u>/51/</u>

OTHER INFORMATION Colors/dyes

The product should be stored in original packaging at temperature between $+0^{\circ}C(32^{\circ}F)$ to $+30^{\circ}C(86^{\circ}F)$.
