

## TECHNICAL INFORMATIONS TECHNOLOGY

No. 070n

**Customer: Mechanical Plants** 

Consultation: M.Sc. Eng. Piotr Anioła - CHESTER MOLECULAR - Poznań

**PROBLEM DESCRIPTION:** In the vibrating device for processing in loose abrasive, defects were found in the rubber lining protecting the trough in which the elements cleaned with the abrasive mix.

**DESCRIPTION OF THE REPAIR:** After removing the fragments of rubber not attached to the metal substrate, the regenerated areas were cleaned and roughened with an angle grinder. Then, it was degreased with **Chester Fast Cleaner F-7** and activated with a primer layer of **EL 10M** on metal and **EL 20M** on rubber. **Chester Elastomer 75 T** was applied to the prepared surface in layers until the resulting losses were eliminated (thickness approx. 5 mm).

**ACHIEVED EFFECTS:** Thanks to the use of Chester Molecular materials, it was possible to carry out the above repair in a short time without the need to transport the device to a specialized repair facility.
