

DESCRIPTION:

Aktywator A is a one-component activator for Chester Molecular anaerobic adhesives and sealants. It is used to increase the cure speed of anaerobic products and to prepare passive surfaces before the application of Chester anaerobic adhesives and sealants. Evaporates quickly at room temperature.

TYPICAL APPLICATION:

It is especially recommended for applications with passive metals or inert surfaces, low temperatures, and with large bond gaps.

Technical Data

Appearance	liquid
Density [g/cm ³] at 25 °C	0,8±0,05
Colour	light green
Flash point [°C]	-17

PROPERTIES

The parameters obtained with the use of the preparation are included in the Technical Data Sheets of individual anaerobic adhesives.

OTHER INFORMATION

Storage

The product should be stored in original packaging in dry and cool rooms at temperature between +0°C (32 °F) to +20°C (68 °F). Protect against contamination.

DIRECTIONS FOR USE

The surfaces to be applied should be dry, clean and degreased. The preparation can be spread with a brush, spraying or dipping. Only one coat should be applied. The gluing operation should be performed after the preparation has dried. When gluing a passive surface with an active one, the activator should be applied only to the first one.
