PRODUCT DESCRIPTION

Chester Release Agent S is a one-component release, separation and release agent. Prevents permanent bonding (gluing) of epoxy products to mapping surfaces.

TYPICAL APPLICATION

Designed for surface separation in repairs with Chester epoxy products by mapping.

PRODUCT PROPERTIES

Form	gel
Colour	white, transparent
Density	1,00±0,05 g/cm ³

OTHER INFORMATION

Storage

The product should be stored in the original packaging.

Method of application

Apply the product with a brush, dry cloth or sponge and then remove any excess.

The separation layer should be as thin as possible so that its thickness does not affect the shape and dimensions of the part to be separated.

The preparation does not dry out - application of epoxy products can be carried out immediately after application.
